

Manual

Overview

The tool compares the established Lab 2 Linear Regression baseline with the performance code.

How to run

Place ISE.py in the same folder as the datasets folder.

Install the dependencies listed in the requirements file.

Run: `python ISE.py`

The script creates a results folder and saves the experiment output files.

Main outputs

baseline_raw_results.csv and improved_raw_results.csv contain every repeat run.

comparison_by_dataset.csv compares baseline and improved mean results for each dataset.

comparison_by_system.csv compares baseline and improved mean results for each system.

stats_by_dataset.csv and stats_by_system.csv contain Wilcoxon signed-rank test results.
