

Requirements

Python version

Python 3.10 or newer.

Python packages

numpy

pandas

scikit-learn

scipy

Install command

```
pip install numpy pandas scikit-learn scipy
```

Input data

The code expects the dataset folder in the same directory as ISE.py. The dataset folder should keep the original structure, with one subfolder per system such as batlik, dconvert, h2, jump3r, kanzi, lrzip, x264, xz and z3.

Output folder

The script creates the results folder containing raw results, summary files, comparison files and statistical test files.
